Departments of Physics and Biology,
Ashoka University, Sonapat &
IMSc, Chennai

Indian Science beyond the COVID-19 Pandemic

The COVID-19 pandemic has illustrated the sheer importance of science to humankind as no other single event has in our past. But it also has illustrated the need for a broader vision of science, especially of interdisciplinary science, and of the relationship between science and the humanities. How do we make students aware of these connections? How can we reimagine science in India as we emerge from the pandemic, strengthening its foundations, making it more inclusive and driving it in new directions that are of special relevance to our country? There are no simple answers to these questions but I will stress the importance of thinking about them with a fresh mind.
