

**Spectroscopic Studies On Hybrid-Materials Of
Medicinally Important Molecules For Enhanced
Biological Activity**

**THESIS
SUBMITTED FOR THE DEGREE OF
DOCTOR OF PHILOSOPHY (SCIENCE)
IN CHEMISTRY**

**BY
DAMAYANTI BAGCHI**

**DEPARTMENT OF CHEMISTRY
UNIVERSITY OF CALCUTTA**

2019

To My Family

Acknowledgements

This gives me enormous pleasure and satisfaction to pay my admiration to those who have helped, motivated and contributed to accomplish my dissertation work. I would like to thank all of them for their kind support.

First and foremost, I owe my deepest gratitude to my enthusiastic supervisor, Professor Samir Kumar Pal, for providing me the opportunity to work under his supervision. I am very grateful for his constant motivation, belief in my capabilities and his persistent availability to clarify my doubts despite his extremely busy schedule. His immense knowledge in multidisciplinary field of science and technology, commitment to the highest scientific standards, unconditional support during crisis that, taken together, make him an exemplary mentor. I feel to be fortunate enough to learn from his instrumental expertise and detail insight into various experimental problems. This work would not have been possible without his thoughtful guidance, warm encouragement, unconditional support, constructive criticism with simultaneous allocation to express my ideas to work independently and his inexhaustible help. His positive vibes, everlasting energy, disciplined nature, great leadership quality and enduring willingness for learning motivates me substantially and thank you very much Sir for inspiring me to believe in my dreams.

I am grateful to get the opportunity to actively work with talented researchers from various national and international institutes. I would like to thank Prof. Peter Lemmens of TU Braunschweig, Germany, Prof. Saleh A. Ahmed of Umm Al-Qura University, KSA, Dr. Debjani Karmaakar of BARC, India, Dr. Indranil Banerjee, National Institute of Technology Rourkela, India, Prof. Partha Saha of SINP, India, Prof. Maitree Bhattacharyya, Department of Biochemistry, University of Calcutta, India and Dr. Chinmoy Bhattacharya of IEST, India for fruitful collaborations.

I express my gratitude to all the faculty members and the office staffs of S. N. Bose National Centre for Basic Sciences for their assistances in my research career. A sincere appreciation to all other non-academic staffs and gardeners of SNBNCBS who have actively maintained the magnificent ambiance of the centre. I acknowledge Department of Science and Technology (DST), India for providing me INSPIRE fellowship as financial assistance.

I'd like to express my sincere gratitude to all my seniors and colleagues for providing an enriching work environment. I am especially thankful to Dr. Siddhi Chaudhuri and Dr. Samim Sardar for mentoring me at the initial stage of my research work. I am grateful to Dr. Shreyasi Dutta for helping me in the experiments related to biology. My sincere appreciation goes to all my seniors: Dr. Nabarun Polley, Dr. Susobhan Choudhury, Dr. Prasennjit Kar, Dr. Prasanna Kumar Mondal and earlier lab-member Mr. Ramesh Nandi. I acknowledge Dr. Tanushree Dutta for working with me on the topic of hybrid materials. My sincere admiration goes to all the present group members: Priya, Jayita, Aniruddha, Tuhin, Probir, Animesh da, Arko, Arpan, Susmita, Dipanjan, Nur, Dr. Gulmi Chakraborty, Dr. Tatini Rakshit, Dr. Souendra Darbar, Souendra da, Lopamudra, Deep Shikha, Amrita, Pritam, Ria, Sumana di, Anindita, Sayan, Oiendriila, Suman for providing a homely and a cheerful environment, and also for assisting me during research work. I am grateful to Abhijit da and Sudip da who have helped me during simulation and biological studies respectively. Special thanks to Priya & Jayita for their assistance in formatting and proof-reading of my thesis. A very special thanks to Priya with whom I shared many wonderful and glorious moments over the last five years. I also thank Aniruddha, Jayita and Tuhin with whom I shared many joyful moments in recent past. I pay tribute to all my teachers throughout my life. I also want to thank all my friends especially Subhodip, Dibbendu, Nabaruna and Ninni for their support and all the good times I shared with them.

Finally, I would like to pay high regards to my family and all of my relatives for their love, affection, praise, and good wishes. Without the enormous sacrifices of my mother, encouragement and support from my elder sister and brother-in-law, great motivation from my grandmother, fondness of my little niece and blessing from my father, this thesis would not have acquired its shape. I hereby acknowledge and thank all those who directly or indirectly supported me in this mesmerizing venture.

CONTENTS

	Page
Chapter 1: Introduction	
1.1. Background	1
1.2. Hybrid Materials: A Brief Overview	2
1.3. Hybrid Materials of Medicinally Important Molecules	3
1.4. Scope of the Spectroscopic Investigation on Hybrid Materials of Medicinally Important Molecules	4
1.5. Objective	8
1.6. Summary of the Work Done	
1.6.1. Spectroscopic Studies on the Complexation of Various Metal Ions with a Medicinally Important Drug for Enhanced Biological Activity	11
1.6.1.1. Modulation of Stability and Functionality of a Phyto-antioxidant by Weakly Interacting Metal Ions: Curcumin in Aqueous Solution	11
1.6.1.2. Bimetallic Zeolitic Imidazolate Framework as an Active Excipient of Curcumin under Physiological Condition	12
1.6.2. Experimental and Computational Studies on the Formation of Nanohybrid of a Medicinally Important Drug with Inorganic Nanostructure	13
1.6.2.1. Sensitized ZnO Nanorod Assemblies to Detect Heavy Metal Contaminated Phytomedicines: Spectroscopic and Simulation Studies	13
1.6.3. Spectroscopic Studies on the Photosensitization of an Enzyme through Specific Molecular Recognition	14

	Page
1.6.3.1. Allosteric Inhibitory Molecular Recognition of a Photochromic Dye by a Digestive Enzyme: Dihydroindolizine Makes Alpha-chymotrypsin Photo-responsive	14
1.6.4. Spectroscopic Studies on Photosensitization of a Drug Delivery Vehicle for Enhanced Biological Functionality	15
1.6.4.1. Essential Dynamics of an Effective Phototherapeutic Drug in a Nanoscopic Delivery Vehicle: Psoralen in Ethosome for Biofilm Treatment	15
1.6.5. Spectroscopic Studies on a Hybrid Material of Red-light Active Dye with an Inorganic Oxide Material for Potential Photo-medicinal Application	16
1.6.5.1. NIR Light Active ZnO Based Nanohybrids for Bacterial Biofilm Treatment	16
1.6.5.2. Exploration of Interfacial Dynamics in Squaraine Based Nanohybrids for Potential Photodynamic Action	17
1.6.6. Spectroscopic Studies on a Porous Metal-organic Framework for Enhanced Drug Loading and Near Infra-red Sensitized Drug Activity	18
1.6.6.1. Nano MOF Entrapping Hydrophobic Photosensitizer for Dual-stimuli Responsive Unprecedented Therapeutic Action against Drug-resistant Bacteria	18
1.7. Plan of thesis	19

 Chapter 2: An Overview of Experimental Techniques and Systems	
2.1. Steady-state and Dynamical Tools	27

	Page
2.1.1. Photoinduced Electron Transfer (PET)	27
2.1.2. Förster Resonance Energy Transfer (FRET)	28
2.1.3. Data Analysis of Time-Resolved Fluorescence Transients	31
2.1.4. Distance Distribution between donor and acceptor	32
2.1.5. Photovoltaic Device	33
2.1.5.1. Photovoltage Decay Measurement	33
2.1.6. Circular dichroism (CD)	33
2.1.6.1. Theory	34
2.1.6.2. Experimental methods	36
2.2. Systems	36
2.2.1. Organized assemblies (Biomimetics)	36
2.2.1.1. Ethosomes	36
2.2.2. Proteins	38
2.2.2.1. α -Chymotrypsin (CHT)	38
2.2.3. Molecular Probes	38
2.2.3.1. Curcumin (Cur)	39
2.2.3.2. 2,5-Cyclohexadiene-1,4-dione (p-Benzoquinone, BQ)	39
2.2.3.3. 2,2-diphenyl-1-picrylhydrazyl (DPPH)	39
2.2.3.4. Dichlorofluorescein (DCFH)	40
2.2.3.5. 7H-furo[3,2-g] chromen-7-one (Psoralen, PSO)	40
2.2.3.6. Tris(4-(dimethylamino) phenyl) methylium chloride (Crystal violet, CV)	41
2.2.3.7. Dihydroindolizine (DHI)	41
2.2.3.8. Acridine-3,6-diamine (Proflavine)	41
2.2.3.9. Squaraine (SQ)	42

	Page
2.2.3.10. 3-(4,5-dimethylthiazol-2-yl)-2,5-diphenyltetrazolium bromide (MTT)	42

 Chapter 3: Instrumentation and Sample Preparation	
3.1. Instrumental Setups	47
3.1.1. Steady-state UV-Vis Absorption and Emission Measurement	47
3.1.2. Time-correlated Single Photon Counting (TCSPC) Technique	48
3.1.3. Femtosecond Resolved Fluorescence Upconversion Technique	49
3.1.4. Circular dichroism (CD) Measurement	50
3.1.5. Transmission Electron Microscopy (TEM)	51
3.1.6. Scanning Electron Microscopy (SEM)	52
3.1.7. Dynamic Light Scattering (DLS)	53
3.1.8. X-ray Diffraction (XRD) Measurement	55
3.1.9. Thermogravimetric-Differential Thermal Analyzer (TG-DTA) Setup	56
3.1.10. Fourier Transform Infrared (FTIR) Measurement	57
3.1.11. Laser Raman Spectroscopy	59
3.1.12. Fluorescence Microscope	60
3.1.13. Cyclic Voltammetry (CV)	61
3.1.14. Electrochemical Impedance Spectroscopy (EIS)	63
3.1.15. Photovoltage Decay Measurements	64
3.2. Sample Preparation	64
3.2.1. Chemicals Used	65
3.2.2. Synthesis of Metallo-curcumin complexes	65

	Page
3.2.3. Synthesis of Cu(II)-curcumin complex from Zn(II)-curcumin Complex	65
3.2.4. Synthesis of Cu/ZIF-8 and Cur@Cu/ZIF-8	66
3.2.5. Synthesis of ZnO Nanorods (NRs)	67
3.2.6. Electrochemical Deposition of Cur and M-Cur Complexes on ZnO NRs	67
3.2.7. Synthesis of PSO- and DCM-Containing Ethosomes	68
3.2.8. Synthesis of Photochromic Dihydroindolizine (DHI)	68
3.2.9. Preparation of Protein-DHI (CHT-DHI) solution	68
3.2.10. Preparation of SQ-Sensitized ZnO Nanohybrids	68
3.2.11. Synthesis of ZIF-8 and ZIF8-SQ	69
3.2.12. Determination of Antioxidant Property	69
3.2.13. Preparation of Dichlorofluorescein and ROS Measurements	69
3.2.14. Bacterial Strain and Culture Conditions	70
3.2.15. Development of Bacterial Biofilms	70
3.2.16. Cytotoxicity Assay	71
3.2.17. Hemolysis Assay	71
3.2.18. Propidium Iodide Staining Assay	71
3.2.19. Internalization of Nanohybrids into Bacterial Cells by TEM Observations	72
3.2.20. Fabrication of a Photovoltaic Device for Photocurrent Measurements	72
3.2.21. Details of Molecular Docking Calculations	72
3.2.22. Details of Density Functional Calculations	73
